

WATER CISTERN FOR IRRIGATION

Cisterns are water tanks that collect and store rainwater from your roof. They are typically installed above or below ground and are used to supplement or replace the water supply for landscape irrigation. A cistern storage capacity ranges from 200 gallons to 10,000 gallons. They are also typically equipped with an electric pump to facilitate pressurized distribution to an automated landscape irrigation system. Cisterns are constructed of durable material, such as concrete, plastic, polyethylene, or metal.

Rebate Information

Install a rain water cistern at your home or business and receive a rebate of \$0.10 per gallon up to \$1,000.

Benefits

Using a cistern to store and reuse rainwater reduces or eliminates storm water runoff from the site. It conserves water and reduces your monthly irrigation water bill.

Benefits

Using a cistern to store and reuse rainwater reduces or eliminates storm water runoff from the site. It conserves water and reduces your monthly irrigation water bill.

Incentive Requirements

1. Applicable to Residential and Commercial Improvement projects, and New Construction projects
2. Applicable to OUC Orlando water customers only
